

2017 SHAW FEMALE SALE SPRING BREEDING UPDATE SHEET

*****NOTE: All of the spring calving females were either sychronized and bred A.I. on 4/3/17, 4/15/17, 5/4/17, or were bred A.I. off natural heats. The females that are confirmed bred have been pregnancy tested via ultrasound. None of the females have been pasture exposed. Shaw Cattle Co. guarantees the information below to be accurate as of sale day and further guarantees all females in the sale that are a year of age and older to be sound breeders according to their respective breed association terms and conditions. However, Shaw Cattle Co. does not guarantee that all of the females will remain safe to the A.I. service that is listed after transportation, so we recommend that the buyers re-preg their purchases once they are delivered and/or turn with a bull. The fall bred females are just like it is reported in the catalog.**
